

Build Apps & Websites with AI

Ship a working product in a day, with no coding background needed

A hands-on build workshop where every participant takes an idea to a live, shareable app or website using AI tools. Ideal for innovation cells, hackathon prep and final-year projects.

DURATION	AUDIENCE	FORMAT
Full-day (6 hrs) or a 3-session bootcamp	Students of any stream, innovation/incubation cells, faculty, founders	Laptops and internet required, build-along format, 20-80 participants

What participants walk away with

- Take an idea from brief to a live, shareable link
- Describe features clearly enough for AI tools to build them
- Understand pages, data, forms and logins at a working level
- Debug and iterate instead of starting over
- Leave with a portfolio-ready project and a next-steps plan

Session agenda

Modules are re-ordered and re-weighted based on your batch size and available time.

01 Idea to spec

Turning a vague idea into screens, users and data.

02 Building the first version

Prompt-driven building, live on screen and on laptops.

03 Data & forms

Storing information, collecting entries, showing lists.

04 Logins & access

When you need accounts and how to add them safely.

05 Publishing

Going live, sharing a link, and collecting feedback.

06 Show & tell

Every participant demos what they built.

Good to know

- **Can non-technical students build something in this workshop?** Yes. The workshop is designed for students of any stream. Participants describe what they want in plain language and learn how to guide AI tools to build it.
- **What should participants bring?** A laptop, a stable internet connection and an idea they care about. No prior coding experience is needed.
- **What kind of projects can be built?** Common outcomes include personal websites, portfolio apps, simple tools, event landing pages, and prototype apps for ideas or social causes.
